Please forward to someone who will
answer.
Enclosed you will find a self
addressed and stamped envelope,
please answer.

I have inquired around and
cannot find anyone to tell me if
what we see could be satellites.
This is the only address I could
find that might be able to tell
me.

I am no letter writer or
artist but enclosed is a crude
map.

We have been watching very
bright round lights in the sky.
We see them every nite. When
they go under a star they black
out the star. The light is the same
all of the time. Bright, round
SEND 164.

smooth edges.

I used to watch the satellite Echo #1. These lights go as slow or even slower. To be sure it is moving one must line it up with an object or star or it would not be noticed. Even in pointing it out if one sees it, the other has a hard time sighting it.

The star #1 on the map and star #2 seems to be a guide, a turning point, the square our viewing point,

Here are a few, June 23,
#1 the blue line June 24, ~~line~~
line #2 & 3, look how it jumped
and went back & forth. June 25,
cloudy but saw others. June 26, #4 & 5
#4 went straight #5 perfect
square around #2 star ~~June 27~~
#6 around #1 star to #2 star
June 27, four of at an outdoor
movie.

— saw #7 around #1 star #8
coming also. watched to see
what would happen when
they met. #8 kept going #7
went around #8. June 28

#10 and #12 met and went
together #12 kept jumping
from side to side then would
make a leap forward.

There are many more but
this is a few to give you an
idea of their course.

There is silence no noise
the light bright & round.
slow and straight steady all
but #12 which we see almost
every night. #1 we see every
night we look for it. Neither
of these stars are the north stars.

We are in line with plenty
of airplanes but they are not
planes, balloons could not be

the regular or go around stars
or collide when come in the same
path. Satellites around stars
and others to prevent collision.

We have enjoyed watching
them.

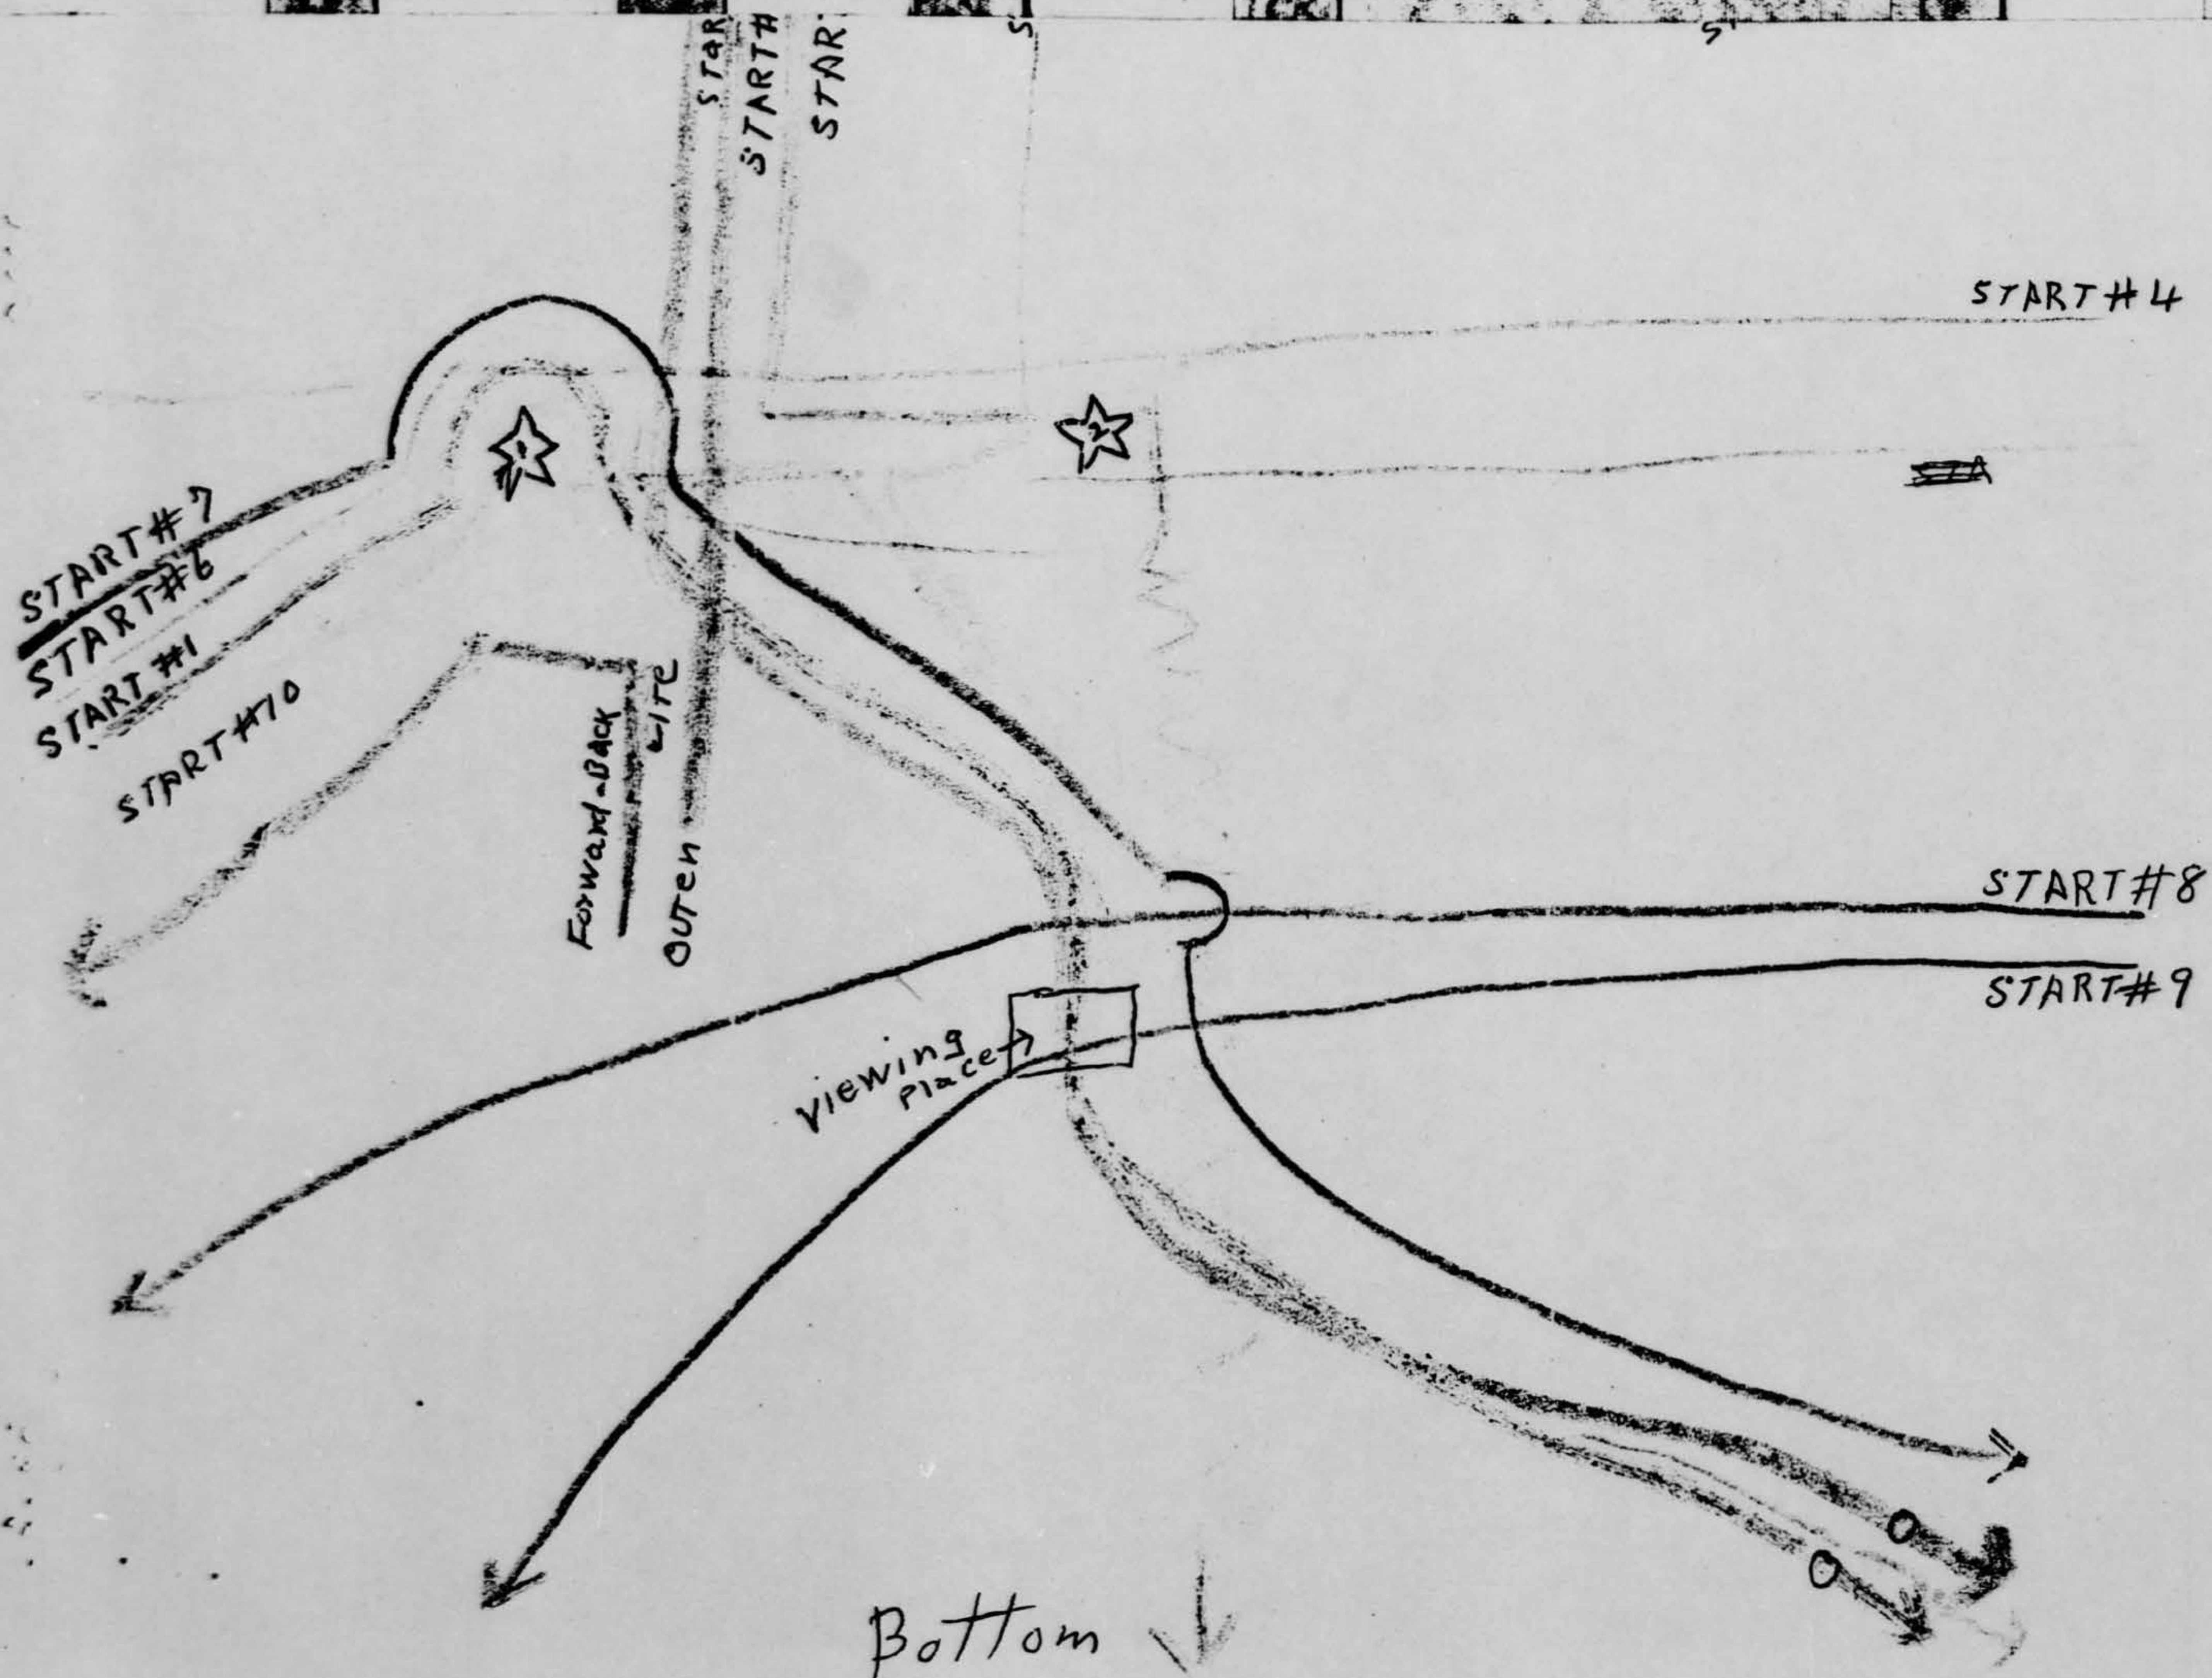

Could you please give us
an idea what we are watching.

We have covered everything
netors, etc. But these are
regular every night we look
we can see them.

Please answer

Mrs. ~~Elizabeth~~

One person here insists
they a U. S. C. on patrol.
